## **From Reader Review Reignited: Scientific Pathways to a Brighter Future for online ebook**

### **Anubhav Balodhi says**

This is an awesome book for the ones who are (still) in love with Science. It will surely make your inner Science-buds tingle. The language is simple enough for kids to understand and the writing style is intriguing. A must read for the teachers and parents.

---

### **Aruna Kumar Gadepalli says**

Easy and quick read. What made me hooked to this book is the way the book is organized. The book deals with the various areas of knowledge - Robotics, Aeronautics, Pathologist, Space Scientist, Neuroscientist, Material Scientist and Paleontologist. The book deals with basic idea of all the fields and how one can study various institutes that provide these subjects along with subject expert interview added to this what the parents can do if the children are interested in the above subjects.

---

### **Abdul Kareem says**

If you ask me seriously... this is one of the great book I have read in my student days.. Awesome book! This book interprets that science is a gift that god gives us.. Enjoyed a lot!!

---

### **Bookvook says**

The future of science and how can you be a part of it. An exceptionally relevant book for children and parents alike who are confused of the various available career choices and choosing the right one.

plethora of information about various fields related to science and the scope in all.

A must read for students graduating from high school and even the ones who are at the cusp of choosing the specialised stream.

---

### **Siddharth Chakravarthy says**

#### *Simply Superb*

This book basically deals with the latest trends in science and the developing fields which are touted to have a great potential.

The fields discussed in this book are ;

1)Robotics

- 2)Aeronautics
- 3)Pathologist
- 4)Space Scientist
- 5)Neuroscientist
- 6)Material Scientist and
- 7)Paleontologist ( A person who studies about the Fossils,Origin of Life etc)

If you take a particular topic, say, Robotics..

First, There will be an Introduction..Which gives us a fair idea about what that field is and who were the pioneers in that field. Abdul Kalam Sir also shares his own experience with respect to that field in this part. After Introduction, Comes the Applications of the Field and even more information about that field. Such as .. Where it is used...When it was used.. the upcoming developments etc. Hope you get a gist of what i said. Then there is "*Conversation with a science Teacher*" . It is basically Q&A's. FAQ's to be precise. The Common doubts regarding the field etc. The answers are very crisp and easy to understand. For example, The big bang theory. We all must have known about it. but Some of us are still unable to explain or understand that event. But Abdul Kalam Sir has given a lot of wonderful examples and illustrations to explain the various Concepts which i feel is *too* good. He also gives us the basic information about how we can work in that particular field. There are ample illustrations for our better understanding and there is also a *Note to parents* section where he advises the parents on how to nurture the child's talent in that field.

---

This book is ideal for teenagers who have enormous interest in science. This book gives a great insight to the up-coming fields and trends in the science industry. Moreover, Being the work of Hon.Former President Abdul Kalam.. This book is truly worth reading.

---

### **Ravish says**

the book is informative and inspiring no doubt, but is good for school children only. For someone like me who has already taken a career path, there was very little we can do to ourselves by using the information in book.

---

### **Amna Buheji says**

The future of science is within the pages of this book!! Very interesting!

---

### **Rahul Venugopal says**

Got this book from a friend who came back after attending APJs funeral. Thoroughly motivating for any mind who wants to climb the mountain of science. Book is a neat travelogue and covers Robotics, Aeronautics, Pathologist, Space scientist, Neuroscientist, Material scientist and Paleontologist.

---

## **Hiranya Gupta says**

Must Read Book.... it really tells the Future of Science!

---

## **Senthil says**

Gist of whats happening around in various science fields. Must read for students in 10th and 12th.

---

## **David says**

The book has lot of problems. From typos to factual errors, the book is more like a self-help book than a popular science book. Read full review at

<http://techmusicnmore.blogspot.in/201...>

---

## **Brij Shyam says**

It's a good book for early stage student and for parents too, of course, to make a good decision of carrier by understanding each fields. It's organised in a good way, ensuring that necessary (can't say sufficient 'cause it depend person to person) thing are explained in order to make a good decision.

---

## **Philip says**

good for students and concerned parents to see what science can offer in terms of career, not good for general readers. the only thing i liked is the stylized chapter titles.

---

## **Sendhilkumar Alalasundaram says**

The book presents 9 lucrative scientific careers along with the experiences of experts in each field.

A wonderful book for all the science enthusiasts aspiring to explore the various courses science that have profound relevance and scope in the times to come.

---

## **Sahana says**

Reignited by APJ Abdul Kalam and Srijan Pal Singh was a very enlightening book. I liked it very much. The basic format of this book is Information, Conversations with a Science Teacher, Meet The Expert, Note

to Parents, an Oath and sometimes an Exercise.

It was very fascinating, but could be a little dry at times.
